

HARDI launches four flagship products at Agritechnica – **all with a 2-year warranty**

At Agritechnica 2025, HARDI INTERNATIONAL will present four major innovations: a preview of the self-propelled AREX, the trailed AEON TWIN FORCE, the updated NAVIGATOR DELTA FORCE, and the lift-mounted MEGA PRO FORCE.

Together, these models highlight HARDI's commitment to intuitive operation, accessible servicing, and proven reliability – now reinforced by a 2-year warranty that gives professional farmers greater peace of mind and reduced ownership risk.

AREX – premium precision in self-propelled spraying

Capacity with precision and reliability

The all-new AREX marks HARDI's entry into a new era of self-propelled sprayers. Presented as a preview at Agritechnica 2025 ahead of its 2026 launch, AREX offers tank capacities of 5000 and 6000 litres and is designed for professional farmers demanding capacity, precision, comfort and proven reliability.

The SmartCom platform, together with GeoSelect Gen 2 and PulseSystem, empowers farmers to make smarter spraying decisions while reducing plant protection product use.

GeoSelect Gen 2 is HARDI's next-generation offline spot-spraying solution, which uses pre-loaded weed maps to target only where weeds are present, saving input costs and reducing environmental impact. PulseSystem, based on pulse width modulation (PWM), gives precise nozzle control with instant rate changes and individual nozzle shut-off, ensuring every droplet is placed exactly where it should be.

The next-generation TWIN FORCE booms with intelligent, newly developed boom management build on HARDI's proven technology to reduce drift by up to 80% while maintaining stability at high speeds.

AutoFold reduces folding and unfolding time, significantly improving operator safety and comfort while ensuring efficient transitions between field and transport.

Comfort and serviceability

Integrated telemetry and advanced remote diagnostics give dealers and service teams the tools to support farmers proactively, minimising downtime. A powerful 310 HP Cummins engine and ActiveRide independent single-wheel suspension deliver exceptional driving stability and performance. The redesigned WorkZone with newly designed SmartFiller and FluidBox 8000 simplifies liquid handling, while AutoAgitation, AutoFill and AutoWash make everyday operation faster and easier.

Inside, the premium operator cabin provides intuitive controls, low interior noise and outstanding comfort, helping operators remain focused and productive throughout long working days.

Sales of AREX will officially begin in 2026 in Europe and Australia, following its public preview at Agritechnica.

AEON TWIN FORCE – trailed performance with air-assisted precision

Air-assisted efficiency

The AEON series is among the most advanced trailed sprayers on the market, with tank sizes up to 7000 litres. Equipped with the proven TWIN FORCE air-assisted boom, AEON delivers superior coverage and canopy penetration while reducing drift and chemical use by up to 30%. The PulseSystem with CurveControl technology, and variable application per section further enhances precision – especially at higher speeds and in curved field areas.

Smart operation and stability

AEON is designed for safe, straightforward operation. With the integrated FluidBox display in the WorkZone, all everyday tasks are simplified, while automated filling, agitation, and cleaning increase safety and ease of use.

ComfortTrack steering and a fully suspended chassis ensure excellent stability in all conditions. Built to endure, AEON is backed by a 2-year warranty for dependable performance season after season.

NAVIGATOR – value-driven precision in trailed spraying

Performance and value for modern farming

The updated NAVIGATOR continues to set the benchmark in the trailed sprayer segment and is now available in Standard, TITANIUM line and CENTURA line. With tank sizes from 3000 to 6000 litres, NAVIGATOR is designed for medium- and large-scale farmers seeking both value and proven performance.

Upgraded standard specifications – including hydraulic bypass valve, hydraulic oil filter and pressure empty – make everyday operation simpler and more efficient. A redesigned WorkZone with FluidBox 7000 provides intuitive liquid handling, while the DELTA FORCE boom – available in widths from 18 to 39 m – ensures stability and accuracy across varied terrain. NAVIGATOR also adopts HARDI's modern grey design, visually aligning with AEON, ALPHA and MEGA as part of the HARDI family.

Reliability and peace of mind

NAVIGATOR is backed by a 2-year warranty across all models, giving farmers predictable ownership costs and higher resale value. Proven HARDI spraying systems deliver consistent results, while the service-friendly layout ensures faster daily checks and easier access to key components. Together, these upgrades minimise downtime and keep machines in the field, season after season.

MEGA PRO FORCE – performance without compromise

Lift-mounted power

The MEGA PRO FORCE sets a new standard for lift-mounted sprayers, combining a compact design with the performance normally associated with larger trailed machines. With tank capacities of up to 2200 litres and PRO FORCE booms from 15 to 28 m, MEGA ensures precision spraying in every pass while advanced features such as AutoTerrain and AutoFold provide stable boom control, even at higher speeds.

Precision made accessible

MEGA can be equipped with AutoNozzleControl, reducing overlap, saving chemicals, and minimising environmental impact. Its intuitive WorkZone design makes daily handling straightforward, while AirRide suspension enhances operator comfort. With SmartCom ISOBUS compatibility and easy service access, MEGA integrates seamlessly into modern farming systems.

Backed by HARDI's proven diaphragm pump technology and a 2-year warranty, MEGA delivers reliability season after season.

Innovation backed by reliability

With a full range of mounted, trailed, and self-propelled sprayers, HARDI reinforces its position as a leading innovator in crop care technology. By combining intuitive operation, accessible servicing, and proven reliability, all four models represent a future-proof investment for professional farmers.

The 2-year warranty across the entire range further reduces ownership risk, giving farmers the confidence to operate efficiently season after season.
